

Thesis / Internship

We offer:

- Integration into a research group with ongoing research projects and new research ideas
- Opportunity to work on lightweight structural design
- Training in a variety of techniques and methods for the design, manufacturing, testing, and modeling of composite structures
- Opportunity to present and discuss your findings within the research group
- Flexible project timelines

We are looking for students interested in:

- Practical research (e.g., design and manufacturing of composite structures, mechanical testing, and material characterization)
- Theoretical research (numerical modeling, structural optimization, and AI-based tools)
